New York, NY | (929) 456-7517 | freiazhang968@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

EDUCATION

New York University

Master of Science in Management and Analytics (Business Analytics | GPA: 3.92/4.00

New York, NY

Expected: Feb 2027

- Relevant Coursework: Business Analytics, Quantitative Research Methods, Machine Learning, Database Management Systems

Chongqing University of Technology

Bachelor of Management in Administration Management | Rank: Top 10%

Chongqing, China

Graduated: May 2025

- Relevant Coursework: Probability & Mathematical Statistics, Python, Economic Analytics, Social & Behavioral Psychology

TECHNICAL SKILLS

Data Analytics: SQL (CASE WHEN, CTEs, Window Functions), Python (Pandas, NumPy, Scikit-learn), R, Excel, SPSS

Data Visualization & BI: Tableau, Power BI, Dashboard Design, KPI Reporting, PowerPoint

Data Management: MySQL, SQL Server, ETL, Data Pipeline, Relational Data Modeling, Query Optimization

Methods & Technologies: A/B Testing, Hypothesis Testing, Machine Learning (Logistic Regression, Decision Tree, K-Means Clustering), Correlation, Segmentation, Spark, Git/GitHub

PROFESSIONAL EXPERIENCE

Google

Beijing, China

Data Analyst Intern

Jul 2026 – Sep 2026

- Queried and transformed 100K+ advertising performance records across 10+ App clients and 50+ campaigns using SQL (JOINS, GROUP BY, CASE WHEN, aggregations), creating datasets across campaign, channel, and time dimensions
- Analyzed CTR, CVR, CPA, CPC and conversion KPIs in Pandas using WoW/MoM trends, benchmarks, drill-down, and driver analyses to diagnose performance shifts and identify root causes across campaigns, regions, devices, and channels
- Standardized SQL extraction and Python transformation into an automated Tableau reporting pipeline for 8 KPIs and 6 dimensions, reducing weekly data preparation from 3 hours to 1 hour and supporting recurring performance reviews

AI Solutions

Covina, CA

Data Platform Development Intern

May 2026 – Jul 2026

- Maintained and queried SQL Server data across 12+ relational tables for user, question-bank, and quiz modules, using joins, inserts, updates, and stored procedures to support platform data flows and application analytics
- Modified 10+ SQL Server stored procedures and 2 database migration scripts to implement data-validation, soft-delete, and cascading logic, improving data integrity and preserving historical questions and subject records
- Built a Tableau dashboard to monitor weekly registration and AI-recommendation performance metrics for a learning platform serving 4K+ users and 1.5K questions, automating recurring KPI reporting for internal and client stakeholders

Nielsen IQ (GfK)

Guangzhou, China

Quantitative Analyst Intern

May 2025 – Aug 2025

- Cleaned and validated 2.6K+ consumer survey responses across Saudi Arabia and Egypt, identifying inconsistent, malformed, and anomalous records and preparing analysis-ready datasets for cross-market and segment analysis
- Analyzed purchase drivers, pricing, brand preference, and channel behavior in Excel and Python using descriptive statistics and segment comparisons; supplemented survey data with scraped product pricing, specifications, and launch information
- Synthesized quantitative findings and qualitative consumer insights across Saudi Arabia, Egypt, and India into client-facing reports, translating behavioral patterns into recommendations on product positioning, feature priorities, and channel strategy

PROJECT EXPERIENCE

E-commerce User Growth & Purchase Intent Analytics | [Code](#) | [Tableau](#)

Aug 2026 – Sep 2026

- Analyzed 12.25M+ e-commerce events with SQL in DuckDB, building user-item tables and four-path funnels; identified 21.1% cart-assisted conversion and designed a 24–48 hour abandoned-cart recovery strategy based on conversion timing
- Examined retention, repeat purchase, and promotion-period behavior over a 9-day window; 62.1% of 6,881 buyers purchased on multiple days, while purchases rose 4.7x versus 1.6x traffic growth, informing promotion planning
- Built a logistic-regression purchase-intent model on browsing, favoriting, cart, purchase, and activity features; top-decile hit 84.3% (1.58x average), then translated scores into a 2×2 purchase-history–intent segmentation and prioritized outreach list

Ad Strategy A/B Testing & Rollout Decision Analysis | [Code](#) | [PowerBI](#)

Jun 2026 – July 2026

- Designed analysis of a 3-arm ad experiment on 2.6M click records, pre-specifying CTR, hypotheses, significance level, 80% power, 5% MDE; flagged 200K+ contaminated users and validated the exclusion via sensitivity analysis
- Validated with Bonferroni-corrected two-proportion z-tests; day-stratified analysis showed Strategy 1's pooled +46.5% lift was largely driven by day 1, fading to an insignificant +3.6% on day 2, while Strategy 2 stayed significantly positive
- Recommended halting Strategy 1 and staging Strategy 2's rollout based on its conservative day-2 lift (~6,900 clicks per 1M impressions, 95% CI: 5,800 – 8,100), with a 10% holdout group and rollback triggers to mitigate the two-day limitation
